CAREER OBJECTIVE

Data Science postgraduate (M.Sc., graduated April 2026) with hands-on experience in Python, SQL, machine learning, and full-stack development, gained through internships building sentiment-analysis models, analytics dashboards, and a centralized data management web application. Currently an Associate Trainee at Orbytes Global, seeking an entry-level Data Analyst role to apply strong analytical, statistical, and visualization skills to support data-driven decision-making and stakeholder reporting.

EXPERIENCE

Associate Trainee — Orbytes Global Sep 2026 – Present | Team Lead

Centralized Data Management Website & Recommendation Engine

- Led cross-functional collaboration across a 5-member team as Team Lead, communicating weekly requirements to stakeholders and teammates with zero delays.
- Applied prompt engineering and AI-assisted development using the Antigravity generative AI tool to specify requirements and generate the application's front end and backend, applying HTML knowledge to guide and review the output.
- Developed a prototype recommendation engine (35 sample listings) using machine learning to demonstrate preference-based search and filtering for end users.

Data Science Intern — Inlighnx Global Private Ltd Jun 2024 – Jul 2024 | Remote

Flipkart Reviews Sentiment Analysis

- Cleaned and preprocessed thousands of Flipkart product reviews using Python and SQL, converting text to numerical features via TF-IDF; trained Logistic Regression, Naive Bayes, Random Forest, and SVM classifiers, with Random Forest achieving 85% accuracy.
- Used data storytelling to present actionable insights on sentiment distribution and review-length patterns, informing stakeholder product strategy decisions through clear stakeholder communication.
- Wrote SQL queries (joins, aggregations, filtering) to extract and prepare review data for analysis alongside Python-based preprocessing.

AI-Powered Task Management System (Infyntrek Systems)

- Built an end-to-end ML pipeline classifying tasks into 7 categories using Linear SVM with TF-IDF (81.5% accuracy) and predicting priority via XGBoost (63% accuracy); built a heuristic workload-balancing engine reducing workload imbalance by 93% versus baseline.

EDUCATION

M.Sc. in Data Science & Analytics — Jain University, Bangalore 2024 – Apr 2026

B.Sc. in Computer Science — Sri Ramakrishna Mission Vidyalaya College of Arts and Science 2020 – 2023

SKILLS

Core Skills: Python, SQL, HTML, Machine Learning, Prompt Engineering, Generative AI Tools, AI-Assisted Development, Data Storytelling, Stakeholder Communication, Cross-Functional Collaboration

Libraries & Frameworks: pandas, scikit-learn, XGBoost, TF-IDF, Linear SVM

Tools & Visualization: Tableau, Power BI, Microsoft Excel

Relevant Coursework: Machine Learning, NLP, Probability & Statistics, Data Analytics and Data Mining, Data Structures, DBMS, Big Data Technologies

ACADEMIC PROJECTS

Impact of Airbnb on the Traditional Hotel Industry

- Engineered features (e.g., listings per 1,000 hotel rooms) across thousands of city-level records; built regression models ($R^2 = 0.917$) showing a strong negative correlation between Airbnb density and hotel occupancy (-0.94), with each 100 additional listings reducing occupancy by $\sim$11%.
- Found demand drives pricing while Airbnb competes on availability rather than price, presenting stakeholder-facing recommendations on service differentiation and dynamic pricing strategies.

Hawaii Airbnb Market Analytics Dashboard

- Analyzed Hawaii Airbnb pricing trends, finding Honolulu the top market at $18,181 average revenue per listing (48% higher than Maui); built an interactive Tableau dashboard with parameter-driven KPI switching and geospatial EDA.
- Built for data-driven stakeholder reporting and decision support.

CERTIFICATIONS

Python Programming • Foundations: Data, Data Everywhere • Probability Theory: Foundation for Data Science • Data Analytics with SAS • Apache Spark: An Introduction in Detail • Principal Component Analysis with NumPy (Coursera) | Forage Job Simulations: Deloitte (Data Analytics), Tata (Data Visualisation)

Languages: Tamil (Native), English (Fluent) | Willing to relocate across India
