CAREER OBJECTIVE

Data Science postgraduate with hands-on SQL, Python, and BI-tool experience gained through an analytics internship and self-driven marketplace-analytics projects. Comfortable writing complex SQL (joins, window functions, CTEs), building stakeholder-ready dashboards in Tableau and Power BI, and translating messy data into decisions. Looking to join a data team at a fast-moving marketplace like Headout to build the reports, dashboards, and automations that drive growth, product, and operations decisions.

SKILLS

SQL: Complex joins, window functions, CTEs, query optimization/debugging (MySQL, SQL Server)

Python: pandas, NumPy for data cleaning, manipulation, and lightweight automation

BI & Visualization: Tableau (parameter-driven dashboards, geospatial EDA), Power BI, Microsoft Excel

Data Concepts: Data warehousing fundamentals, relational database design (DBMS coursework), data mining, big data technologies

Other Languages/Tools: R, HTML, SAS, scikit-learn, NLTK, matplotlib, seaborn, Django

Currently building: Exposure to dbt and Airflow-style pipeline concepts through coursework in data warehousing and big data technologies

EXPERIENCE

Data Science Intern — *Inlighnx Global Private Ltd*

Hawaii Airbnb Market Analytics Dashboard | SQL, Tableau, EDA (Marketplace Analytics)

- Analyzed pricing, seasonality, and availability trends across a two-sided Airbnb marketplace to uncover revenue, pricing, and demand patterns — directly analogous to supply-side and dynamic-pricing analysis in a travel/experiences marketplace.
- Designed an interactive, parameter-driven Tableau dashboard (Revenue, Price, Availability, Reviews) so non-technical stakeholders could self-serve KPIs instead of requesting one-off reports.
- Ran geospatial EDA to map neighborhood-level demand, identifying high-revenue zones and room-type performance differences — the kind of city/segment-level cut needed across dozens of markets.

Flipkart Reviews Sentiment Analysis | Python, SQL, NLP

- Collected, cleaned, and preprocessed large-scale e-commerce review data (nulls, duplicates, stopwords) and engineered TF-IDF features for downstream modeling.
- Trained and evaluated Logistic Regression, Naive Bayes, Random Forest, and SVM classifiers, comparing accuracy, precision, recall, and F1 to select the best model.
- Converted sentiment-distribution and review-length findings into actionable, stakeholder-facing product recommendations.

AI-Powered Task Management System | Python, Automation

- Built a Python application that automates task prioritization by predicting urgency/importance, replacing manual triage with a repeatable, rules-plus-model workflow.
- Engineered features from deadlines, descriptions, and historical completion patterns to drive dynamically updating priority scores — an automation pattern directly transferable to recurring reporting and alerting workflows.

ACADEMIC PROJECTS

Impact of Airbnb on the Traditional Hotel Industry | Python, SQL, Excel (Marketplace / Supply-Side Analysis)

- Studied how growing marketplace supply (Airbnb listings) affects incumbent hotel performance across major cities, collecting, cleaning, and merging panel data and engineering supply-pressure features such as listings-per-1,000-hotel-rooms.
- Built regression models in SQL and Python; findings showed rising alternative-accommodation supply pressures budget/mid-scale hotels, and recommended service differentiation and dynamic pricing — a direct parallel to supplier-economics and pricing questions in an experiences marketplace.

EDUCATION

M.Sc. in Data Science & Analytics, Jain University, Bangalore — 2024 – 2026

B.Sc. in Computer Science, Sri Ramakrishna Mission Vidyalaya College of Arts and Science — 2020 – 2023

CERTIFICATIONS

Python Programming • Foundations: Data Everywhere • Probability Theory: Foundation for Data Science • Data Analytics with SAS • Apache Spark: An Introduction in Detail • Principal Component Analysis with NumPy (all Coursera)

PERSONAL DETAILS

Languages Known: Tamil (Native), English (Fluent) | Willingness to Relocate: Open to relocation across India
